

Smart Diving Winch

Fishing Mecasub

The new Fishing Mecasub controller makes operating your diving winch easier, more convenient and safer. Forget about counting turns or working out when to stop the ascent: the unit manages the process for you and shows all the information on a clear display.

1 RELEASE
Pull the red cord to release the diving weight.

2 STOP AT THE SET DEPTH
At the selected depth, reverse rotation stops it for a programmable 1 to 20 seconds.

3 WAITING TIME
Programmable delay: 1 to 300 seconds.

4 ASCENT AND NEW CYCLE
Retrieves to zero, then stops until the next dive.

MAX. LIFTING WEIGHT 20 kg	MODE 1 - ASCENT SPEED 20 m/min	MODE 2 - ASCENT SPEED 40 m/min	4 mm line capacity: 60 m 3 mm line capacity: 80 m
-------------------------------------	--	--	--

More control, less hassle and a more comfortable dive.

Always know where it is

The winch has sensors that count cable turns as it operates. The display continuously shows the metres of cable paid out and the number of turns, with an accurate counter that also works correctly when retrieving the cable and returning to the starting point.

When the cable reaches your set depth, the unit automatically applies the brake for the selected duration. It then begins the ascent immediately if no waiting time is set; if a delay is configured, it waits for that period before ascending.

A display you can read at a glance

The display clearly shows the metres, turns and winch status in large characters: READY, BRAKE, WAIT or ASCENT (LISTO, FRENO, ESPERA or SUBIDA). It also shows your set depth and braking time.

Easy settings on the unit itself

Use the simple buttons to set the depth, turns per metre, waiting time and braking time.

Open the menu, select the value and you are ready to go.

Your settings are saved even when the unit is switched off, so you do not need to configure it every time you use it.

Simple operation with three buttons

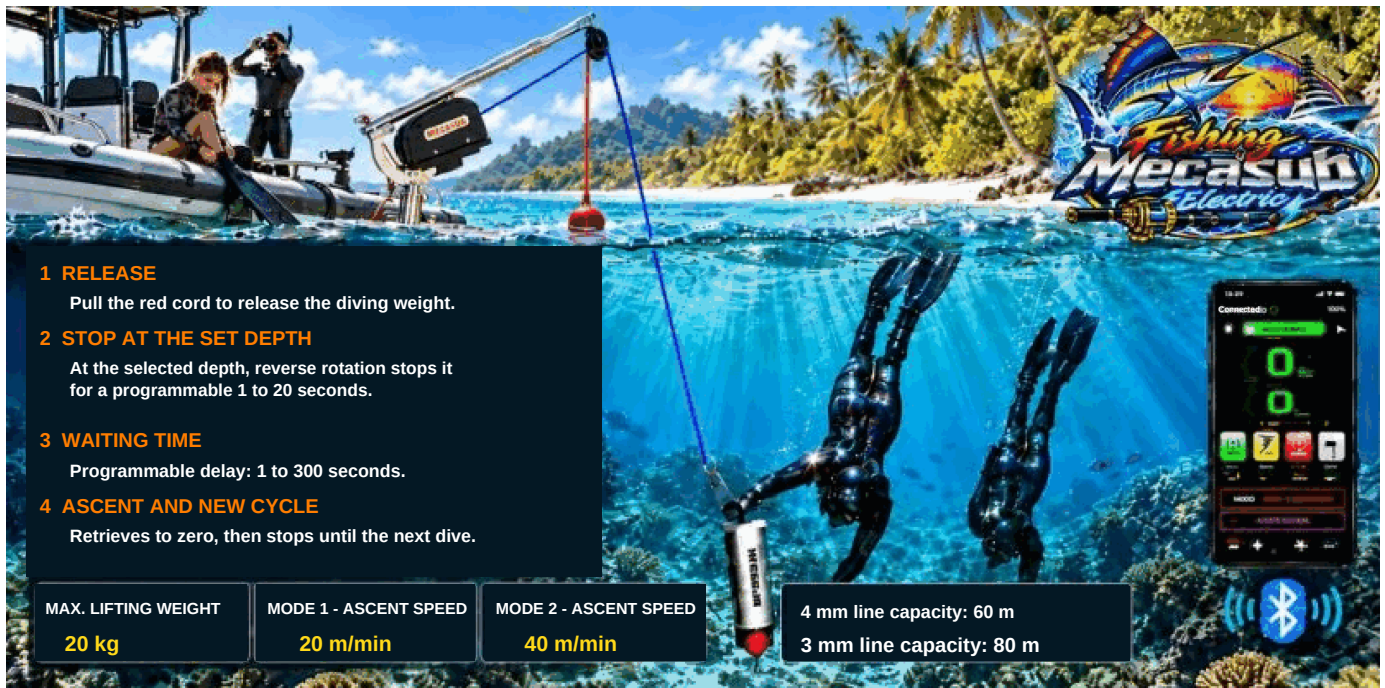

Green button: press and hold to raise the winch.

Double-press green: open the settings menu.

Yellow button: switch settings; double-press to exit the menu.

Red button: increase values; press and hold to reset the counter to zero.

Everything is designed for quick operation, even with wet hands or when working beside the water.

Control from your phone

The unit has built-in Bluetooth, so you can check its status and send commands from a compatible app or terminal. You can stop the winch, reset the counter to zero, view operating information or adjust the depth and timing settings without standing next to the display.

Designed for anglers and divers

This smart winch is designed for anyone who wants to spend less time on manoeuvres and enjoy greater peace of mind in the water. It automates the ascent, controls the depth and always displays the important information clearly.

Fishing Mecasub: more control, less hassle and a more comfortable dive.
